Auction House Remastered for uMMORPG Remastered

Requires ***uMMORPG Remastered 2.30+***

This addon will add a auction house system to your uMMORPG Remastered game to allow players to buy and sale items with other players on your server.

Table of Contents

1. Features
2. Installation (Using uMMORPGs default scene or your own)
3. Installation (Using demo scene)
4. Changing Settings
5. Support
6. Website

Features:

- Every tab of the auction house supports pages, will show a max of 20 items per page and is changeable.
- Search items by full or partial item name with level range and category/subcategory.
- Sort items by clicking on the column names to sort ascending (a-z/0-9) or descending (z-a/9-0).
- You can bid on selected items at the minimum bid allowed, enter in a higher bid if you wish, or you can buyout the item. (Note: You cannot bid or buyout your own auctions)
- If a bid matches or is higher than the buyout then it will buyout the item at buyout price.
- View active auctions you have previously bid on to allow you to bid if you have been outbid or increase your previous bid.
- Post auctions up for sale to other players. Posting of auctions has a deposit fee based on this calculation: (ItemVendorSalePrice x StackSize x DurationFeePercent).
- Each duration length is in days and can be changed along with its fee percent. Default values are: (1 Day - 0.1%, 3 Days - 0.2%, 5 Days - 0.3%)
- If you post an auction and it sales you will be refunded the deposit fee.
- When an auction has ended, there is a final value fee that is subtracted from the sellers earnings automatically.
  (Default fee is 0.1% of the auctions final value)
- You can claim all your gold and items from a claims tab from auctions that have ended or been outbid on.
- Every 15mins (changeable) a check for auctions that are needing to be ended is ran and processed.
- Multiple Auction Houses based off an id on the player, This will enable you to have separate auction houses based on class or if your game has factions. All players with the same id will see the same auctions.

Installation: *(Requires uMMORPG Remastered to be imported into the project.)*

Method 1: *(Using default scene or your own scene)*

1. Make sure you have imported uMMORPG Remastered into your project. If you get an error about LibuvUtils after importing uMMORPG Remastered, restart unity and this error should go away. This error is nothing to do with this addon.
2. Open scene "World" from "Assets/uMMORPG/Scenes" folder or you can use your own scene.
3. Select the "NetworkManager" object from the hierarchy and add the script "RandysAuctionHouseRemastered.cs" from folder "Assets/uMMORPG/Scripts/Addons/RandysAssets/AuctionHouseRemastered".

4. Place prefab "AuctionHouse" from "Assets/uMMORPG/Scripts/Addons/RandysAssets/AuctionHouseRemastered/Prefabs/UI/AddToCanvas" onto the "Canvas" object in your hierarchy.
5. Select the npc you wish to offer auction house and in the inspector add the script "RAHR_Npc.cs" from "Assets/uMMORPG/Scripts/Addons/RandysAssets/AuctionHouseRemastered".
6. On each of your items (Assets/uMMORPG/Resources/Items) there is a new property "Auction House Category", You will need to set your desired category for each item.
7. Press play, click "Server & Play", if you do not have a character click on create, set its name and class and click create, then click your character and click Start and run to the npc you choose in step 4 and click him and click "Auction House" to open up the auction house ui. This works just like most any other auction house in any other game.

Method 2: *(Using demo scene)*

1. Make sure you have imported uMMORPG Remastered into your project. If you get an error about LibuvUtils after importing uMMORPG Remastered, restart unity and this error should go away. This error is nothing to do with this addon.
2. Open scene "Demo" from "Assets/uMMORPG/Scripts/Addons/RandysAssets/AuctionHouseRemastered/Scenes".
3. On each of your items (Assets/uMMORPG/Resources/Items) there is a new property "Auction House Category", You will need to set your desired category for each item.
4. Press play, click "Server & Play", if you do not have a character click on create, set its name and class and click create, then click your character and click Start, You should see a npc named "Auctioneer near you. Go up to him and click him then click "Auction House" to open up the auction house ui. This works just like most any other auction house in any other game.

Changing Settings:

- *Network Manager* (Select the NetworkManger in the hierarchy, in the inspector on script: RandysAuctionHouseRemastered.cs):
  - Auction House Initial Process: Time from after starting the server to check and process ended auctions. (Default: 15 seconds)
  - Auction House Process Interval: Time between repeating checks for auctions that are needing to be ended and ends and processes them. (Default 900 seconds / 15 minutes)
- *Player Prefabs* (Select from "Assets/uMMORPG/Prefabs/Entities/Players". In the inspector on script "Player.cs" under Auction House Remastered)
  - Id: Used for multiple auction houses, every player with the same id will see same items in the auction house, can be used to separate auction houses based on player factions.
  - Duration Fee: Duration option for posting of auctions along with insertion fee percentage.
  - Final Value: Amount of gold to be taken from the final value of the sold auction.
  - Items Per Page: Amount of results to show per page on the ui.
- *Categories*
  - To add/remove/modify categories/subcategories edit the file "Assets/uMMORPG/Scripts/Addons/RandysAssets/AuctionHouseRemastered/RAHR_Categories.cs"
  - This file contains enums for the main categories as well as the subcategories.
  - Each category and subcategory has a description attribute which is the name of the category that is shown in the ui, this allows you to use spaces in the categories names.
  - Subcategories have a RAHR_SubCategoryOf attribute which is used to define the main category.
